22% of incidents involve a worker being struck by a moving object or vehicle*

36% of fatal injuries to workers by main industry*

(*RIDDDOR 2019/20)

How to improve the safety of your workforce

Accident statistics in our industry do not make pleasant reading, particularly those involving vehicles and pedestrians or fellow workers.

Making sure your operations are not only efficient but more importantly conducted in the safest possible environment has to be the key focus for heavy plant teams. FTC has always worked very closely with their customers over the years reviewing their working practices and providing bespoke advice on the right products and how to use them.

Our growing range of safety systems has innovative products that we guarantee will help to reassure your staff and reduce potential incidents.

FTC's comprehensive consultancy package with full analysis, evaluation, reports, and strategies is your first step to a healthier and safer workplace.

STEP 1 Analysis of Now

Your current logistic material flows and processes are assessed and throughput data collected. Related functional areas are considered with close co-operation and consultation with all stakeholders.

STEP 2 Consolidate the Potential

Results are consolidated and summarised. 'Quick wins' are identified. We obtain a comprehensive discussion document and provide immediately identifiable options for improvement.

STEP 3 Evaluation and Creation of an Action Log

The operational data is analysed and summarised into a simple action log highlighting short, medium, and long-term fleet adjustments. The needs of the operation are harmonised with the available MHE options.
